

**(B) AMENDMENTS TO THE SPECIFICATION**

Please amend paragraph [0035] on page 11 of the specification as follows. Equations (1) and (2) are unchanged.

[0035] Some embodiments of a method according to the invention include transforming the data acquired at each sensor pair from the time-space domain into the spatial frequency domain. One method for transforming data from the time-space domain to the spatial frequency domain is the temporal Fourier transform. Additionally, some embodiments of a method according to the invention include further transforming the data from the spatial frequency domain into the spatial Fourier domain. As a matter of convenience, the spatial Fourier transform in the horizontal direction ( $x_1$ ) is used. This spatial Fourier transform is defined as:
